SECRET

SUGGESTED NEW ITEM FOR THE SENIOR PLANNING CONFERENCE IN DECEMBER

TITLE: Intelligence Support to Electronic Warfare

ISSUE: How best to enhance intelligence capabilities to provide support to electronic warfare in emergencies.

BACKGROUND: Electronic warfare is composed of three divisions:

- Electronic Warfare Support Measures - actions taken to search for intercept, locate, record and analyze radiated electromagnetic energy for exploitation in support to military operations.

- Electronic countermeasures

- Electronic jamming
 - Electronic deception
 - Manipulative deception
 - Imitative deception

- Electronic counter-countermeasures

There is need to recognize that in crisis and wartime the resources of the NFIP must be capable of providing timely intelligence support to US and allied electronic warfare activities.

- With the rapid trend toward near-real-time processing systems, we are increasingly vulnerable to wartime reserve mode/parameter changes.

The role of the Intelligence Community in providing timely technical intelligence for EW applications needs to be clearly identified and recognized.

SUGGESTED CONFERENCE DISCUSSION

How can the Intelligence Community better organize for EW support in emergencies and develop improved capabilities to rapidly search for and identify emitters exhibiting wartime reserve modes and to perform in wartime the timely analysis and reporting required to support modifications to the software of processing systems and reprogrammable jammers.

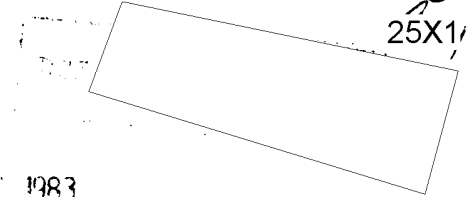

How to stimulate an in-depth look at both NFIP and Program II/III funded activities in this field.
